¹Permissible: -15% of the target stiffness. This applies to 100% of all measured single values. The single value is a calculated average of five measurements per sheet. The stiffness has to be measured at both sides. The resulting average value is then the stiffness of the single sample. L&W 5° figures are binding, Taber figures are indicative.

All figures mentioned above may be subject to technical changes.

The cartonboard may contain traces of virgin fibre.

MCM BASIC – the economic choice – combines ecological with economic benefits. Complete reliability of supply can be guaranteed by production in two locations: Kolicevo (Slovenia) and Frohnleiten (Austria). Customers and distribution partners therefore benefit from maximum supply reliability as well as consistently high quality.
